Making sure you get as much light as you want:

Light output from a bulb is measured in “lumens.” When you’re shopping for a compact fluorescent bulb (“CFL”) to replace a standard bulb, find the bulb you normally buy and find the lumen output rating on the package. Then go to the CFL bulbs and find one that has a similar lumen output. Use the table below to help you choose the right bulb.

“Standard Bulb” Watts	Equivalent Compact Fluorescent (“CFL”) Watts
60	14-17
75	18-21
90	22-23
100	24-26
150	35-40

How do I know which CFL to buy?

The least expensive CFL may not be the best buy. Customers often find that more expensive bulbs last longer than cheaper ones. Be sure to look over the package carefully before you buy. The packaging should indicate where the bulb will perform up to your expectations. For example, the packaging should indicate whether the bulb is suitable for enclosed fixtures, cold locations, or damp locations. With a few exceptions, CFLs should not be used with dimmers, occupancy sensors, or photocells unless they are specifically rated for those uses.

CFL bulbs and Fixtures must have the Energy Star Label to qualify for this offer.
